

CLAIMS

1. A method of manufacturing a layered silicone composite material comprising the steps of:
applying a second addition-curable organopolysiloxane composition that contains a
second adhesion promoter onto a first silicone layer that is formed by curing a first
5 addition-curable organopolysiloxane composition containing a first adhesion promoter and
where the first silicone layer has a hardness of less than JIS A 50; and
forming a second silicone layer that has a hardness of JIS A 50 or more by curing said
second addition-curable organopolysiloxane composition.
2. A method of manufacturing a layered silicone composite material comprising the steps of:
10 applying a first addition-curable organopolysiloxane composition that contains a first
adhesion promoter onto a second silicone layer that is formed by curing a second addition-
curable organopolysiloxane composition containing a second adhesion promoter and where
the second silicone layer has a hardness of JIS A 50 or more; and
forming a first silicone layer that has a hardness of less than JIS A 50 by curing said
15 first addition-curable organopolysiloxane composition.
3. The method according to Claims 1 or 2, where at least one of the first adhesion promoter
and the second adhesion promoter is an organosilicon compound containing, per molecule,
at least one alkoxy group, at least one alkoxyalkoxy group, or both.
4. The method according to Claim 3, where at least one of the first adhesion promoter and the
20 second adhesion promoter contains at least one silicon-bonded alkenyl group, at least one
silicon-bonded hydrogen atom, or both.
5. The method according to Claims 3 or 4, where at least one of the first adhesion promoter
and the second adhesion promoter contains at least one epoxy group.
6. The method according to any of Claims 1 to 5, where at least one of the first addition-
25 curable organopolysiloxane composition and the second addition-curable
organopolysiloxane composition is free of inorganic filler.
7. The method according to any of Claims 1 to 6, where the layered silicone composite
material is an optically transparent material.
8. The method according to any of Claims 1 to 7, where layered silicone composite material is
30 at least a part of an optical element.
